

## EBBERS-KICKSTOP AUTOMATIC

Very easy to put on and take off. Setting up for setup is no longer necessary.

**AUTOMATIC TENSIONING SYSTEM:** In case of restless cows (heifers), the kick stop automatically tightens. No more falling kick stops. This greatly increases the learning effect of the heifers.

**ERGONOMIC:** No additional effort is required when setting up or taking it off. No more overloading of shoulders by working above your power.

Relax under strain easily and quickly. By low control button. Also good to use when milking between the hind legs.

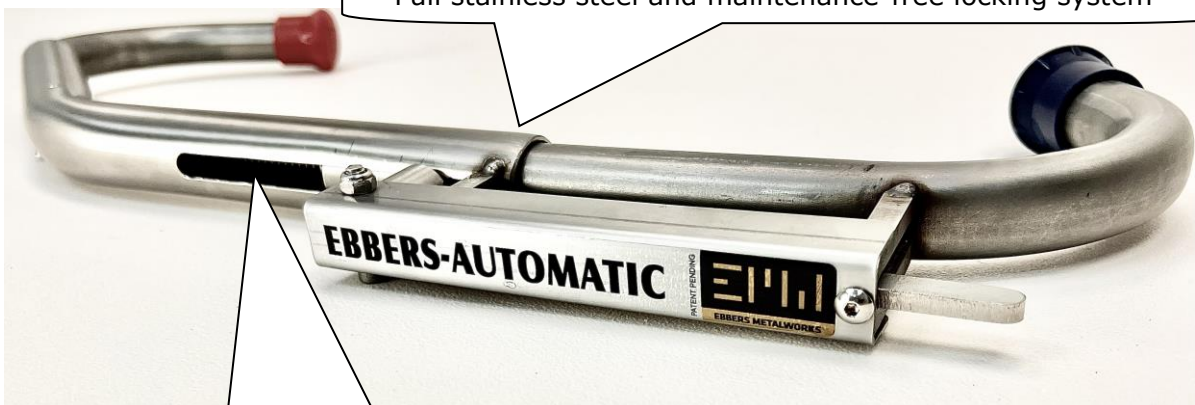

**OPERATION:** A light spring pulls the lower curved tube inwards. A smart system blocks the extension. With a simple thumb control, the blockage is lifted so that the bracket can be removed in the extreme position.

**Complete stainless steel, corrosion-free!**

Very user-friendly thumb control

Full stainless steel and maintenance-free locking system

Automatically adjusts by internal spring
