

Manure Roller

WALS

Scarab

Not slide.... but rolling !

With the WALS Scarab your cows will keep healthy hooves and clean tails and udders. The unique roller (WALS) ensures that manure disappear directly through the grate gaps

- Much cleaner slatted floor
- No collection of manure in front of the machine

- Clean results in all weather conditions , Ideal in case of dry and thick manure.
- Highly manoeuvrable Zero-Turn and fast driving speed
- Robust, fully zincd chassis

The smart way to clean your cow housing

Manure Roller WALS Scarab

The Scarab excels in the following areas:

Rolling principle ensures cleaner results:

The unique rolling system ensures that manure does not collect in front of the machine but disappears **directly through the grooves** of the slats into the manure pit. This intensive method of handling manure provides a **much cleaner barn** than traditional manure scrapers. The collection of manure at the end of the alleys and in difficult-to-reach places becomes a thing of the past with this unique manure roller. That this will prevent the development and spread of many infectious diseases goes without saying.

Patent nr. EP2135505

Manoeuvrable and user-friendly:

With the two independently controlled rear wheels, the Scarab has **maximum manoeuvrability**. Since the Scarab **rotates on its axis**, it has a turning circle of less than 1.5 meters. It is ideal for narrow alleys and difficult-to-reach places in the barn. With a variable speed and a top speed of over 7 km per hour, the barn is **cleaned more quickly** than with any other device. The joystick steering is not only very accurate and **user-friendly**, it is also easy to operate. From a comfortable seat with arm rests, the tidy open frame provides an **optimal view of the work**.

Indestructible and Simple:

The manure roller is specifically designed for the aggressive climate in the barn. Simplicity combined with proven technology make the Scarab indestructible. The **fully galvanized frame** and **high-quality finish** of the other components is highly resistant to the ammonium acids in the barn. In addition, the absence of a complex steering mechanism and other driving techniques that are sensitive to breakdowns, guarantee many years of **reliable**, clean results.

Animal- and Environmentally Friendly:

Due to the use of electric motors, the Scarab works **silently**. Because the farmer sits on the Scarab manure roller during the cleaning of the floors, the cows view this as **very familiar** so peace in the barn is maintained from day one. The electronically powered Scarab operates very **environmentally friendly**; no fuel is required and it is virtually **maintenance-free**.

Lifting the roller with foot.
